MENTOR CERTIFICATE

This is to certify that, G.RAMYA ,II B.A (O.E.P), has carried out the community service project along with the aid of other classmates by surveying for 10 days at Pedakancherla Village, Vinukonda Mandal Palnadu District , Andhra Pradesh.

G. Anjaiah
(Mentor of the CSP Project)

DECLARATION BY THE STUDENT

This Community Service Project report on Village Demographic : A study in Pedakancherla village of Palnadu District has been prepared by me after undergoing 10 days of surveying. This report has not been submitted earlier at any Educational Institution or Organisation and this observation report is originally prepared by me.

G. Ramya
G.RAMYA

Acknowledgements

It gives me an immense pleasure and pride to express my gratitude and respect for my teacher and guide **Shri. G.Anjaiah**, SGK Government Degree College, Vinukonda, Palnadu District, for his expert and inspiring guidance throughout the period of my work. I am indebted to him for enlightening me on the finer skills of dealing with social awareness problems. It would have been impossible to achieve this goal without his constant support and encouragement.

It is pleasant duty to express my sincere thanks to **Dr. K. Srinivasa Rao**, **Principal**, SGK Government Degree College, Vinukonda, Palnadu District who supported me for getting the survey details. I want to thank **Shri G.Anjaiah**, **Head**, Department of English for providing facilities in the Department.

I take this opportunity to thank all of my faculty members of SGK Government Degree College for their valuable suggestions, encouragement and help during my project work.

Last but not least, the undying support, love and sacrifice of my mother, father, sisters and Uncle towards me throughout all these years can never be completely expressed with words alone. I am what I am because of them.

G. Ramya

VILLAGE DEMOGRAPHIC: A STUDY IN PEDA KANCHERLA VILLAGE OF PALNADU DISTRICT

1. INTRODUCTION:

“If you don’t halt population growth with justice and compassion, it will be done for us by nature brutally and without pity and will leave a ravaged world” - **Nobel Laureate Henry w. Kindalls**

The Study of Demographic or population indicators in the Pedakancherla village there is strong association among the indicators and economic development of the village. In generally population is important factor for development of any country or region if the population size is desirable level with respect to its natural resources of the country, in case there is imbalance between population size and natural resources it affects country’s development. as per the optimum size of population theory Car-Saunders defines optimum population as “that population which produces maximum economic welfare”. By optimum population mean the ideal number of population that a country should have considering its resources.

Under the community service project (CSP) we have chosen village demography for the village in that village / community we can involved our domine subject for analyzing the community with demographic indicators which is more useful for community for understanding the quality of life and socio economic conditions. For this we have in addition to create awareness programme in the community.

METHODOLOGY

The study village demographic indicators in the Pedakancherla village of Vinukonda mandal. For this we have taken total 100 samples from each category(25) it includes (OC 25, BC 25, SC 25, ST 25) based on simple random sampling technique with prepared questionnaire for collecting primary data from the sample respondents in the Pedakancherla village. The collected data analysed with simple statistics tools and necessary graphs wherever used.

OBJECTIVES: The study village demography in the cheemalapdu village envisaged the following objectives

1. To find out demographic indicators on economic development
2. To Examine the levels of population size and other indicators

HYPOTHESIS:

1. There is significant effect of demographic indicators on economic development

VILLAGE PROFILE

Pedakancherla Village of Vinukonda Mandal, Palnadu District in Andhra Pradesh is located approximately lies between 16.88 latitude and 80.62 longitude in extreme south west side of the Mandal .The village with population size 4,437 in which male 2,233 and female is 2,204 .The total geographical area of the village is 44.76 sq.km and temperature in normal season 30-35 degree Celsius recorded, in summer it is very hot and recorded temperature more than 40 degree Celsius. The soils in the village majorly red soils occupies 70%, 20% black soils and remaining other soils. The Cropping pattern in the village is in the tune in the rainfall and its spacial disperse in the major crops paddy is cultivated and others crops cotton and pulses produced. Recently the farmers shifting the food crops to non food crops like red chillies, maize and cotton.

The live stock population in the cheemalapdu village 4434 it comprises cattle , ships, goats, buffaloes, cows and other animals. Regarding Infrastructure facilities in the village major roads, drainages, primary schools, upper primary schools, high schools, Anganawadi centres

DATA ANALYSIS

The study on village demographic characters in the Pedakancherla village how it is affects the economic development in the study area for this we have collecting the primary data from the village for assessing the population indicators such as literacy level, sex ratio, birth and death rate levels, Infant Mortality (IMR) and Maternal Mortality Rate (MMR).

	Total	44 (100)	54 (100)	43 (100)	42 (100)	183 (100)

Sources: Field survey(primary data)

*Figures in parenthesis are shown in percentage

The data represent education levels of the house holds in the Cheemalapadu village 50 percent of OC respondents are go for higher education and professional and technical education, followed by Sc 45 percent BC 38 percent and STs are very low entered into higher education, in overall in village primary education and secondarily education are high at 61 percent than higher education and technical education.

Table: 8

Infant Mortality Levels of the House hold in the Pedakancherla Village

S.No	Community	No. of Childs birth for the last one year	No. of Childs died for the last one year	Infant Mortality
1	OC	1	0	0
2	BC	2	0	0
3	SC	1	-	0
4	ST	-	-	0
	Total	4	0	0

Sources: Field survey(primary data)

*Figures in parenthesis are shown in percentage

Infant Mortality Rate is considered as a vital indicator of any region of health status or quality of life. IMR means the number of infants deaths for every 1000 live birth in India the imr rate is 27.6/1000 for Andhra Pradesh 37/1000 in 2020. In the Cheemalapadu village as no Infant mortality deaths in the all the communities it shows good health facilities are available.

Table: 9

Maternal Mortality Levels of the House hold in the Pedakancherla Village

S.No	Community	MMR for the last one year
1	OC	NIL
2	BC	NIL
3	SC	NIL
4	ST	NIL
	Total	NIL

Sources: Field survey(primary data)

*Figures in parenthesis are shown in percentage

Maternal Mortality Rate is defined as the number of maternal death per 100,000 live births. Recently the MMR in India and Andhrapardesh sharply declined in 2020 in India it is 96 where as in Andh ra Pradesh 58.

In the table:9 Maternal Mortality rate in Cheemalapadu village as there is no recorded Maternal Mortality in the all the communities as the Government of Andhra Pradesh playing vital role for providing health facilities to the rural poor through various schemes like Anamea Mukh Bharat (AMB), Surakshit Matratva Ashwasan(SUMAN) and Pradhanmanthri Matru Vandana yojana(PMMVY)

Table: 10

s

Sources: Field survey(primary data)

*Figures in parenthesis are shown in percentage

Work Participation rate is an important factor for economic development there is positively relation between work participation and development of any region. The Census of India 2011 define the work participation rate is in a proportion of working population to the total population the work participation is dependence on age, sex composition, attitude of work and availability of work. In the table:9 data explored the working participating rate in Cheemalapadu village the working participation rate (WPR) is higher in the SC community at 84.6 percent subsequently BC, STs are similar at 68 percent where as lowest work participation rate in the

OC community is at 41 percent. The female work participation rate is lower than male work participation rate in all the categories.

In overall in the Cheemalapadu village work participation rate is 80.3 percent it is higher than the national and state average.

Summary and Findings

The study village demographic indicators in the Cheemalapadu village we can assess the population indicators affects the economic development in the study area for this we have collecting the primary data from the village for analyzing the population indicators such as literacy level, sex ratio, birth and death rate levels, Infant Mortality (IMR) and Maternal Mortality Rate (MMR) on economic development of the village all indicators positively affects the Development.

- In the Cheemalapadu village in total sample of respondents 54 percent their main occupation is agriculture, remaining 15 percent manufacturing and 20 percent service sector.
- Annual Income of the households in the village at 64 percent of respondents their annual income 1.0 lakh to 2.0 lakh in which OC community is high income group where as STs are low income groups.
- 58 percent of the households have large family sizes and 42 percent small families in case of category wise OCs are more small size families.
- In the age composition 80 percent respondents their age is between 15 – 60 years and 20 percent of people they fall under below the 14 years and above the 60 years it indicates great demographic dividend for village
- Sex ratio in the overall in the village at 842 females per thousand male population in community wise the highest sex ratio in SCs where as lowest sex ratio in STs community

Summary and Findings

The study village demographic indicators in the Cheemalapadu village we can assess the population indicators affects the economic development in the study area for this we have collecting the primary data from the village for analyzing the population indicators such as literacy level, sex ratio, birth and death rate levels, Infant Mortality (IMR) and Maternal Mortality Rate (MMR) on economic development of the village all indicators positively affects the Development.

- In the Cheemalapadu village in total sample of respondents 54 percent their main occupation is agriculture, remaining 15 percent manufacturing and 20 percent service sector.
- Annual Income of the households in the village at 64 percent of respondents their annual income 1.0 lakh to 2.0 lakh in which OC community is high income group where as STs are low income groups.
- 58 percent of the households have large family sizes and 42 percent small families in case of category wise OCs are more small size families.
- In the age composition 80 percent respondents their age is between 15 – 60 years and 20 percent of people they fall under below the 14 years and above the 60 years it indicates great demographic dividend for village
- Sex ratio in the overall in the village at 842 females per thousand male population in community wise the highest sex ratio in SCs where as lowest sex ratio in STs community

- Literacy rate in the village is 67 percent of people are literate. Female literacy are lower than the male literacy.
- Infant Mortality Rate and Maternal Mortality death are zero in the village, zero in the IMR and MMR indicates good accessibility of health facilities
- Work participation Rate in overall in the village is 80.3 percent in which female work participation Rate is lower than the Male work participation rate

Suggestions and Recommendations

The following suggestions are made for better development of the community.

1. To give more priority to establish cottage industries/ agro Based industries in that area to reduce dependance on agriculture sector.
2. Family size is to be reduced in the village as 40 percent of the households their family size is large so government create awareness programmes on family planning.
3. There is gender discrimination in the sex ratio in the village number of females are low than male population. To protect the girl child and improve the sex ratio.
4. Literacy levels in the village male literacy is higher than the female literacy in this regards to improve literacy among the females.
5. Infant Mortality Rate and Maternal Mortality Rate both indicators recorded as a zero it means no deaths are taken in the village due to better accesebilities of health facilities to the child and mother.
6. Work Participation Rate in the village males are higher than female WPR in the process of economic development women participation as also equal priority to contribute the income in the village.
